In the Abstract:

Please replace paragraph **[0068]** with new paragraph **[0068]**, shown below.

[0068] ~~A media device in accordance with embodiments of the present invention can provide high density data storage. In one embodiment such a~~ A media device ~~can include~~ includes a phase change media having altered resistivity where data is written to the media. The media ~~can include~~ includes an overcoat to reduce physical damage inflicted on the media from a device such as a cantilever tip in a molecular memory integrated circuit used to write to or read from the media. Data written to the media can ~~be~~ exist in multiple states ~~(for example having multiple resistivity measurements)~~, allowing digital and/or analog data to be stored on the media. ~~Other objects, aspects and advantages of the invention can be obtained from reviewing the figures, specification and claims. This description is not intended to be a complete description of, or limit the scope of, the invention.~~
